

Hi, I'm Splash McClean,
SD1's mascot.

Have you ever
wondered what
happens to rain water
after it storms? This
type of water is called
storm water.

When storm water
falls from the sky it is
usually clean, but when
it flows over the ground
it picks up pollutants
that make it dirty.

Storm water carries the
pollution to storm
drains, which lead to the
nearest creek or river,
places I call home.

How do your daily
actions affect storm
water quality and the
environment?
